/note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nemarcde parasite of humans. Six adult male worms of Onchocerca volvulus were isolated from consenting patients and quick frozen. Adult male mRNA was converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library has 2 x 10E5 independent recombinants and the average insert size is ~1100bp. The library was constructed by Michelle Lizotte-Waniewski with worms provided by Dr. Sara Lustigman. The library is available from Dr. Steven A. Williams, email: genome@smith.edu."

Anotes Vector: Lambda Uni-ZAP XR; Site 1: Eco RI; Site 2:
Xho I; Filarial nematode parasite of humans. mRNA was
prepared from approximately 9,000 L2s isolated from
infected mosquitoes from Kumba, Cameroon and converted to
double-stranded cDNA using reverse transcriptase and
oligo(dT) followed by RNase H and DNA pol I. The library
has 7.3 x 10E4 independent recombinants and the average
insert size is approximately lkb.The library was
constructed by Michelle Lizotte-Waniewski. The library is
available from Dr.S.A. Williams, email: genome@smith.edu."

Continuous filarial nemacode parasite of humans.

Tho 1; Cutaneous filarial nemacode parasite of humans.

RNA was prepared from third stage infective larvae of conchocerca volvulus isolated from mosquitoes 10 days after infection and converted to double stranded cDNA using reverse transcriptese and oblgo GNT followed by RNase H and DNApol I. The library had 1.8 x 10E5 independent recombinants and average insert size was 900 base pairs. The library was constructed by Wenhong Lu. The library is available from Dr. S.A. Williams, email genome@Smith.edu."

a stage of the stag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BI097426 SWOV3MCAM63F09SK Onchocerca volvulus molting L3 larva cDNA (SL96MLW-OvmL3) Onchocerca volvulus cDNA clone SWOv3MCAM63F09 5',

Third-stage larvae, 13, were isolated from infected black files in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. 13 of 0. volvalus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Nematoda; Chromadorea; Spirurida; Filarioidea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Molecular Parasitology

(NDCHE="WestCar: Lambda Uni-ZAP XR; Site 1: Eco RI; Site 2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3. were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. MRNA was isolated from approximately 6000 molting larvae (ML3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA DOI. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is ~1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams.
in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol 1. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10B6 independent recombinants and the average insert size is ~1200 bp. The Library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The Library is available from Dr. Sara Lustigman (email:

/note="Wedgeror: Jambda Uni-ZAP XR; Site 1: Eco RI; Site 2:
Xho I; Filarial nematode parasite of humans. Third-stage
larvae, L3, were isolated from infected black files in
cameroon (forest strain). The L3 were cultured in 20% FCS
in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in
culture. L3 of 0. volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from approximately
6000 molting larvae (mL3), 2000 larvae from day 1, 2 or 3
in culture, and converted to double-stranded cDNA using
reverse transcriptase and oligo(dT) followed by RNASE H
and DNA pol I. The library was constructed in the lambda
Uni-Zap XR vector and has 1 x 10E6 independent
recombinants and the average insert size is -1200 bp. The
library was constructed by Sara Lustigman and Michelle
Lizotte-Waniewski in the Laboratoxy of Dr. S. A. Williams.
The library is available from Dr. Sara Lustigman (email:
slustigm@nybc.org).

(NOTCE="Vector: Lambda Uni-TAP KR; Site 1: Eco RI; Site 2: Kho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black files in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. MRNA was isolated from approximately 6000 molting larvae (mL3), 2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNAse H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x lobe independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michalle Lizotte-Wanniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: shustigm@nybc.org)."

/note="Vector: pBluccript SK-; Site l: EcoRI; Site 2: XhoI;
/Toxoplasma RH strain tachyzoites were grown in human
foreskin fibroblast cultures in vitro. The library was
originally constructed by K.L.Man, Cambridge University.
cDNAs were synthesized from polyA RNAs by oligo d(T)
priming and directionally cloned into the EcoRI to XhoI
sites of the Lambda ZapII vector using the ZAP-cDNA
synthesis kit (Stratagene). The primary cDNA library was
mass excised as phagemid using ExAssist helper phage
(Stratagene). Phagemid Using ExAssist helper phage
(Stratagene). Phagemid Using ExAssist a pool of
highly abundant genes which were derived from short-cycle
PCR of the primary cDNA library. The normalized library
was electroporated into DH10B (GeneHog, Invitrogen, Inc).
WARNING: the library contains a small percentage of cDNAs
derived from the human host cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AZ514453 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-2000 1003-007-20000-0000 1003-0000 1003-0000 1003-0000 1003-0000 1003-0000 1003-00

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Laboratory Mouse DNA Resource Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pmApQ2 (gi|4732114|gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli Xillo-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô

/notes="Vector: PWD421v; Purified genomic DNA from M.
musculus C57BL/G/ (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was bydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was bydrodynamically sheared by repeated passage and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gif 4732114) glp AR129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent B. coli XII0-Gold (Stratagene) cells
and selected for ampicillin resistance."

Submitted (17-JUN-2002) Weisshaar B., Max-Planck-Institut fuer Submitted (17-JUN-2002) Weisshaar B., Max-Planck-Institut fuer Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany This sequence is recovered from the right border of the T-DNA. It indicates an insertion within the locus defined by clone MGH6. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:

Direct Submission
Submitted (21-OCT-2002) Weisshaar B., Max-Planck-Institut fuer
Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
This sequence is recovered from the left border of the T-DNA. It
indicates an insertion within the locus defined by clone F9H3. The
sequences are generated at the MPI for Plant Breedong Research in
the context of the GABI-Kat project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:
http://www.mgiz-koeln.mgg/de/GABI-Kat/.
plants (T1) which were transformed with the T-DNA from vector pActis. The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence IIAhking the insertion. Sequences displaying significant similarity to the A. Halaina nuclear genome sequence processed for submission. T-DNA derived sequences were

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TRE0927/4 GTTAt 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v+ i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing. A Practical Approach, eds. M. Vaudin and B.

```
T 3'], on equal amounts of mRNA from 2 13.5dpc and 2
14.5dpc embryos [total RNA provided by Minoru Ko, Wayne
State Uniu', from 2 ]; double-stranded cDNA was ligated to
Eco RI adaptors (Pharmacia), digested with Not I and
cloned into the Not I and Eco RI sites of the modified
pT7T3 vector. Library went through one round of
Dormalization, and was constructed by Bento Soares and
M Farima Ronald .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pubMed (gqi 4732114 [gb] AR129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

paper towers with district deader. Stratagene's conva-
Synthesis Kit (catalog #200401) was used to synthesis the
CODA. First- strand synthesis was performed with 5-methyl
dCTP, hence the ligated cDNA is heminethylated.
Stratagene's first-strand synthesis primer was used
CGAGAGAGAGAGACACTACTCCGAG(T)-18]. After
second-strand synthesis, the CDNA ends were 'polished'
with clone Pfu DNA polymerase, ligated to EcoRI adapters,
and phosphorylated. The XhoI site within the first-strand
synthesis primer was restricted by digestion with XhoI;
all XhoI sites in the CDNA would be protected by their
hemimethylated status. The CDNA constructs were
size-fractionated with a 500p cutoff, using GibcoBRL Life
factionated with a 500p cutoff, using GibcoBRL Life
Technologies coDNA Size Fractionation column. The column
eluent was then ligated into Stratagene's pBluescript II
XR Predigested vector (pBluescript II SK(+) that had been
digested with EcoRI and XhoI, and phosphorylated). Both
the white and blue colonies appear to contain recombinant
plasmids with cDNA inserts. Blue colonies 9n=15) have been
sequenced, and possess putative cDNA inserts. This library
was constructed by Dr. Paul Ken & Virginia H. Coryell,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /clone lib="Gm-cl004"

It indicates an insertion within the locus defined by clone F27K19. The sequences are generated at the MDI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:

/note==pCR was performed on DNA from Arabidopsis thaliana plants (T1) which were transformed with the T-DNA from vector pAC161. The lines contain one or more T-DNA from vector pAC161. The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. Sequences displaying significant similarity to the A. thalaina muclear genome sequence were processed for submission. T-DNA derived sequences were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AA262253

/note="Wedger: lambda UniZap XR; Site 1: EcoR I; Site 2: Xho I; Cutaneous filarial nemacode parasite of humans.

RNA was prepared from third stage infective larvae of Onchocerca volvulus isolated from mosquitoes 10 days after infection and converted to double stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNApol I. The library had 1.8 x 10E5 independent recombinants and average insert size was 900 base pairs. The library was constructed by Wenhong Lu. The library is available from Dr. S. Williams, email genome@smith.edu."

RNA was prepared from third stage infective larvae of Onchocerca volvulus isolated from mosquitoes 10 days after infection and converted to double stranded CDNA using acter transcriptease and oligo(df) followed by Rnase H and DNApol I. The library had 1.8 x 10E5 independent recombinants and average insert size was 900 base pairs. The library was constructed by Wenhong Lu. The library is available from Dr. S.A. Williams, email genome@smith.edu."

/note="Vector: Lambda Uni-ZAP XR; Site 1: Eco RI; Site 2: Xho I; Lymphatic filarial nematode parasite of humans.—
mRNA was prepared from young adult worms isolated from the peritoneal cavity of jirds and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library has 6.5 x 104 independent recombinants and the average insert size is approx. 800bp. The library was constructed by Michelle Lizotte-Waniewki. The library is available from Dr. S.A. Williams, email: genome@neal.smith.edu."

Xho I; Filarial nematode parasite of humans. mRNA was
prepared from approximately 9,000 L2s isolated from
infected mosquitoes from Kumba, Cameroon and converted to
double-stranded cDNA using reverse transcriptase and
oligo(dT) followed by RNase H and DNA pol I. The library
has 7.3 x 10E4 independent recombinants and the average
insert size is approximately lb. The library was
constructed by Michelle Lizotte-Waniewski. The library is
available from Dr.S.A.Williams, email: genome@smith.edu."

Nonce "W-Cours, lambda Unizap XR; Site 1: EcoR I; Site 2: Xho I; Cutaneous filarial nematode parasite of humans. mRNA was prepared from third stage infective larrae of noncoerca volvulus isolated from mosquitoes 10 days after infection and converted to double stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNAPOI I. The library had 1.8 x 10ES independent recombinants and average insert size was 900 base pairs. The library was constructed by Wenhong Lu. The library is available from Dr. S.A. Williams, email genome@smith.edu."
